

## Energy Efficiency Policy

Saba Infraestructuras, as manager of car parks and regulated areas on public roads, has as its main objective to offer its customers a quality service in line with its reference position in the sustainable mobility sector, to incorporate measures that reduce the effects of climate change, always complying with the legal, standard, and own requirements that the company establishes.

It is Saba's firm intention to implement actions that minimize the CO2 emissions derived from our activity, through the optimization and improvement of processes, the acquisition of energy-efficient and sustainable products and services, as well as through the design of installations that improve energy performance and therefore impact on the reduction of expenditure.

Raise awareness and train our employees, improve energy efficiency through optimal planning in the maintenance of our facilities, and monitor and measure the results achieved, are the basis for achieving goals and objectives through continuous improvement.

Saba Management undertakes to review this policy periodically adapting it to new requirements that may appear and makes it available to all interested parties who require it by disseminating it to all its employees and contractors, and making it available to our customers and the rest of the Society.
